

# Industrialization and Cancer in Louisiana

Arturo Altamirano  
CMPS 3160: Intro to Data Science

# Motivations

- ***“Air pollution is linked to higher cancer rates among black or impoverished communities in Louisiana”*** by Kimberly A Terrell and Gianna St Julien
- **Are these claims true? Can we visualize these claims and uphold them?**
- **Our analysis contributes to the growing body of evidence that Black and Brown communities in Louisiana are overburdened with the negative effects toxic air pollution from petrochemical facilities and other sources...**

Rate of New Cancers in the United States, 2022  
All Cancer Sites Combined, Male and Female, All Races and Ethnicities

# Data Collection and ETL

- Census Bureau's Community Survey
- Clinical Trials and Cancer Studies conducted by cancer.gov
- Accumulated for analysis on data.world

**NATIONAL  
CANCER  
INSTITUTE**

# EDA – On The Right Track

Incidence Rate by County in Louisiana

Death Rate by County in Louisiana

```
#points of petrochemical refineries - https://www.industryselect.com/blog/top-10-manufacturing-companies-in-louisiana
#it would be great if there was a dataset of these somewhere but I have been unable to find any
points_df = pd.DataFrame({
    'Latitude': [30.483988, 29.846726, 29.938748, 30.031041, 32.797383,
                30.065276, 30.526713, 30.240865, 29.933837, 29.995503, 30.476733, 32.470366],
    'Longitude': [-91.169601, -89.991966, -89.970822, -90.897768, -93.415004,
                 -90.593545, -91.746182, -93.272194, -89.944371, -90.409877, -91.210874, -93.789677],
    'Label': ['Baton Rouge Refinery', 'Alliance Refinery', 'Chalmette Refinery', 'Convent Refinery', 'Cotton Valley Refinery',
              'Garyville Refinery', 'Delek Refinery', 'Phillips 66 Lake Charles', 'Meraux Valero', 'Shell Norco',
              'Placid Refinery Port Allen', 'Calumet Shreveport']})

#convert lat/lon to Point geometry using shapely.point
geometry = [Point(xy) for xy in zip(points_df['Longitude'], points_df['Latitude'])]

#create another geodataframe out of these points
points_gdf = gpd.GeoDataFrame(points_df, geometry=geometry, crs='EPSG:4326')

incidence_plotter(merged_Louisiana, 'Louisiana', points_gdf)
```

# EDA - Expanded

Incidence Rate by County in Texas + Louisiana

Death Rate by County in Texas + Louisiana

# EDA - Expanded

# Correlation with Distance

Distance to Incidence Rate

Distance to Incidence Rate:  
Median Income below \$20,000

# Model Training

- A 10NN regressor model yielded decent results when trained on all states recorded pollution metrics.
- Train on pollution levels, predict cancer incidence.

# Minor Problem

# Model Results – California

The figure displays two maps of California, each showing cancer incidence rates by county. The left map, titled 'Actual Cancer Incidence Rate', uses a color scale from 390 (dark blue) to 470 (dark red). The right map, titled 'Predicted Cancer Incidence Rate (Model)', uses a color scale from 457 (dark blue) to 461 (dark red). Both maps show a high concentration of red in the northern and central regions, indicating higher incidence rates, and blue in the southern and coastal regions, indicating lower incidence rates. The predicted map shows a slightly different distribution of rates compared to the actual map, with some areas in the south showing higher predicted rates than actual.

# Model Results – Texas

Actual Cancer Incidence Rate

Predicted Cancer Incidence Rate (Model)

# Model Results – Florida

# Model Results – New York

# Parameter Tuning

- Need more data for such a complex relationship.
- Still see increasing performance.

R2 Score

Mean Absolute Error

# Model Results

- Single digit error rates on 80/20 train test split.
- Could see higher performance with more data, or more tuning.
- I would like to expand this dataset myself, with the distance to nearest plant metric as my pivot point.

# Future Work

- 

# Takeaways

- Noticeable concentration near petrochemical plants and the Mississippi river
- Findings of the Tulane paper are upheld
- Insights gained from this data can be used to accurately predict trends elsewhere
